

# **Virtual Reality for Childbirth Education**

**Marjaana Siivola and Eero Tiainen**  
Lily Diaz-Kammonen and Eeva Ekholm  
Aalto Online Learning

# Aims of the project

Gain experience in using 360 videos in education.

Introduce 360 videos for Aalto teachers and alumni.

Teach childbirth education.

# Process

## Design

- Target group
- Level of interactivity: intro film + Master node

## Filming

- Capturing audio separately with hidden mic
- Capturing with max. resolution of Pano2VR: 4K

## Editing

- Stitching 6 cameras to equirectangular (mono) videos
- Matching audiofiles with video
- Creating Master sequence with all the clips for script
- Recording voice over narrative (in APod)
- Editing clips based on script

## Composition & annotation

- Composing all the material to scenes and hot spots
- Exporting project and embedding it to the web site

## Gear

Filmed with Insta360 Pro

Edited with PremierePro

Annotated with Pano2VR

# How to increase immersiveness?

- Suggested role for the user (not only “ghost”)
- Open protagonistic character for identification (focus is not in individual level)
- “User’s inner voice” attached to the voice of a narrator
- Spatial distribution of the action
- Linear introduction sequence
- Points of interaction
